Scope of delivery:

1. Extreme Q Vaporizer Heating Element
2. Inhalation hose for hookah mode with glass mouthpiece
3. 2x Arizer Cyclone Bowls
4. 2x balloons, food safe, for inhalation via balloon incl. 2 glass mouthpieces (1x pre-assembled)
5. 1x Mini Adapter for Balloons incl. Glass Adapter for Cyclone Bowls
6. Remote control incl. battery
7. Removable power adapter for worldwide delivery
8. Potpourri herbal chamber for aromatherapy
9. Glass picks
10. 2x glass mouthpieces for inhalation tube
11. Replacement sieves set
12. Optionally available power pack for use on the road (Not included)

Front of the Arizer Extreme Q vaporizer / control display:

Menu (press to select mode)

Power: On / Off

Transmitter for remote control

Increase / scroll the respective function

Decrease / scroll back the respective function

Press the menu button until you reach the desired function (You can choose between: Temperature setting, Celsius or Fahrenheit, Bottom light on/off, Blower strength, Standby timer) and there use the up and down button to select the desired feature. On the display you will find the fan speed (level 1, level 2, level 3), as well as the timer mode and the preset temperature.

### Setting options via the remote control:

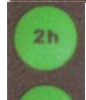

Turns on the blower of the Arizer Extreme Q. Press button 1, 2 or 3 to adjust the intensity. Button 0 turns off the blower.

Switches the blue underbody lighting on or off

Switches the device on or off

Timer keys: To set an automatic switch-off of the device after a certain time, press the respective key. If you want to switch off the timer, press the "0" key.

**Important: Nevertheless, never leave the device unattended!**

Turns the audible acknowledgement tone on the Arizer Extreme on or off

Quick keys for temperature setting with the thermostat.

With these keys, a temperature setting accurate to the degree from 50°C to 260°C is possible.

### Warnings, tips & tricks for operating the Extreme Q Vaporizer:

- The filling and herb chamber becomes very hot during use! Arizer recommends lowering the temperature or turning off the device and letting it cool down for some time before touching the chamber. To remove the Cyclone Bowl, always handle it by the heat-protected rubber sleeve at the top.
- All glass parts on the Extreme Q also become hot! After removing the Cyclone Bowl, it is best to place it on a heat-resistant surface. Never place the filling chamber on a wooden or plastic table when it is heated.
- Never drop the glass parts onto a hot surface - risk of breakage!
- Never wash heated parts of the vaporizer or accessories with cold water. The temperature difference may deform and/or damage this.
- Never press the glass parts together too tightly. If the individual parts are too difficult to separate, clean them.
- The replacement sieves move inside the herb chamber. This is intentional and does not mean that filling material will fall through.
- Try the different temperatures of the vaporizer with small amounts of herbs to find out the ideal vaporization temperature.
- Fill the herb chamber with rather small amounts to allow the release of the active and aromatic substances of the entire content. When using the vaporizer with oils, you should put a drop on an absorbent and non-flammable material.
- Periodically use the supplied glass piercer to mix the contents of the filling chamber.
- The stainless steel filter inside the glass adapter catches small particles released by poking. If this becomes clogged, clean or replace it.
- All heating elements are made of high quality industrial ceramics.
- All silicone-containing parts, such as the inhalation hose, are made of high-quality food-safe material and do not affect the taste or effect of the steam in any way.

# Quick Start Guide

## Whip system for shisha mode

1. Insert the plug of the Arizer Extreme into the socket and switch the device to "ON" by remote control or directly on the front panel. Then set the desired temperature. (When using the Arizer Extreme for the first time, we recommend that you first leave it on the highest temperature setting for 15 minutes, so that any impurities can be loosened and burned off).
2. Now take a little of the desired, crushed starting material and fill it into Cyclone Bowl herb chamber. You can do this step already during the warm-up phase of the device. It is important that you do not press the filled herbs too tightly, so that the sucked air can circulate ideally. If you prefer to use the device with oils, we recommend the use of a sterile cotton pad, which you fill into the herb chamber.
3. Once the unit is heated, attach the glass angle adapter to the herb chamber. This adapter can be rotated 360 degrees, so that this can be attached in all positions.
4. Experiment with different temperatures. Start with a low temperature and work your way up in 5 degree increments to allow for the perfect steam.
5. "Vapor on Demand" is the motto in Shisha mode. Inhale slowly and deeply. The quality and density of the vapor can be ideally controlled in this mode via the speed and length of the inhalation process. The slower you inhale, the denser and stronger the vapor.
6. After 5-6 inhalations, it is recommended to stir the contents of the herbal chamber with the supplied glass poker, so that it is ensured that all herbs are evenly in contact with the heated air.
7. If no more vapor is produced even with slow inhalation, the contents are used up and must be refilled.

## Whip system for shisha mode with use of the blower

1. follow the same steps listed above - additionally switch on the fan:
  - Setting #1 with low speed: Light steam
  - Medium speed setting #2: Light steam with fast output
  - Setting #3 with high speed: Light steam with very fast output

## Whip system for shisha mode as room scenting

The Arizer Extreme Vaporizer is also ideal in this mode to refresh your room with a delicious scent. Fill the Cyclone Bowl with the herbs of your choice, set the fan to medium speed and let the vapor escape from the inhalation hose.

Caution: Some herbs leave their scent very strong in the food grade inhalation hose - If you are not sure, we recommend using a separate hose.

## Arizer Extreme Q with balloon mode:

This option allows you to operate the vaporizer with active blower in conjunction with a balloon. The basic settings are the same as those used for the "Whip System with use of the blower". However, instead of the tube, the "Mini Whip" is placed on the herbal chamber of the vaporizer. At the free end of the short silicone tube is inserted directly the mouthpiece of the balloon.

Once this is placed and the desired temperature is reached, we recommend initially activating the blower on level 2. Once the balloon is filled with steam, first turn off the blower, then press the "On/Off" switch of the Extreme Q. To prevent the delicious steam from escaping the balloon, we recommend closing the mouthpiece with your finger.

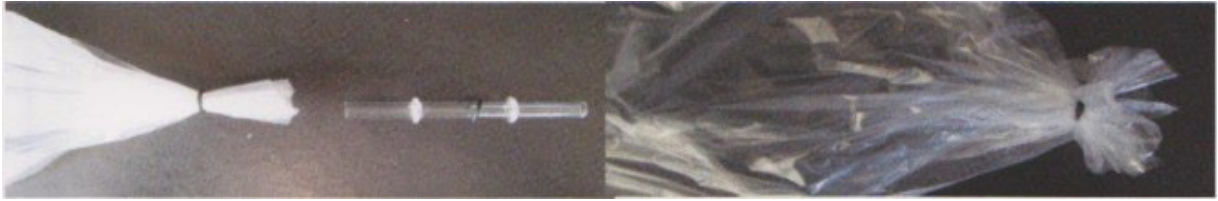

## Arizer Extreme Q with balloon mode for room scenting and aromatherapy:

Follow the steps explained previously to fill the balloon.

Scenting option: This method is ideal for refreshing your room, clothing or closet with a delicious scent. Once the balloon is full, simply point the mouthpiece opening at the area you want to scent and slowly squeeze the balloon, allowing the steam to escape.

Note: Some herbs leave their scent very strong in the food grade balloon - If you are not sure, we recommend using a separate balloon.

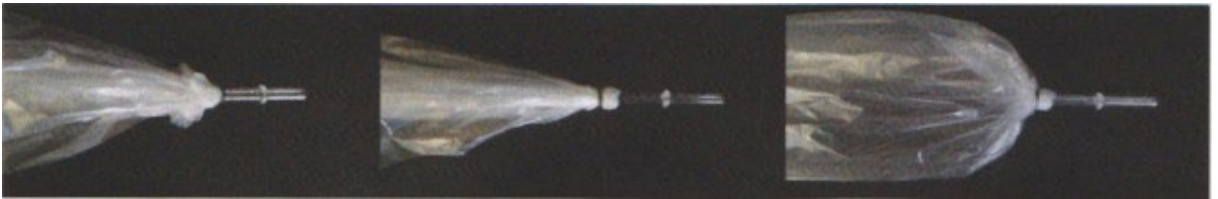

## Mounting a new balloon:

Step 1: Slide one ring up to the center of the mouthpiece as shown. Crumple the end of the Extreme Vaporizer balloon evenly and slide the next ring over the opening as shown.

Step 2: Use your finger to form an even hole around the ring of the balloon and insert the mouthpiece there to about the middle, above the first rise. To avoid damaging the balloon, insert the glass mouthpiece straight.

Step 3: Fold the balloon back and also slide the O-ring back over the first elevation so that it firmly counters with the O-ring located on the balloon. The balloon is now ready for use.

## Arizer Extreme Q cleaning and maintenance:

Before servicing the vaporizer, be sure to disconnect it from the power supply. All parts must be cooled down.

All individual parts of the Extreme Vaporizer are very easy to clean. Pipe brushes, alcohol wipes and lint-free cleaning cloths are best suited for this purpose. Make sure that no water gets onto the heating element or into the device.

If you have any questions about the operation or the Arizer Extreme manual in German, we are always available for you.
